

# CiuisCRM: Installation Steps & Requirement.

## **CiuisCRM System Requirements:**

PHP 7.0 and PHP 8.0 (Php 8 is supported)

- MYSQL 5.1+
- mod\_rewrite Apache
- MBString Extension
- GD Extension
- MySQLi Extension
- PDO Extension
- OpenSSL Extension
- Zip Extension
- CURL Extension
- Cpanel, Virtualmin, Plexpanel, etc. We don't support installations on bare VPS.

## **Installation:**

1. To install Ciuiscrm in your desired domain.
2. Download the package file from your account.
3. Copy the zip file and paste it under www folder in your panel. (For localhost its can be under "htdocs" or www folder" based on your local server.)

## **Create Database:**

You'll need to set up a database to store all your data.

1. Click on **“New”** to create a new database.
2. Type in your database name. select "utf8\_general\_ci" when creating the database, Remember the name you used, you'll be needing it later. We'll use “ciuis” for this demonstration.
3. Click on **“Create”**.

## Databases

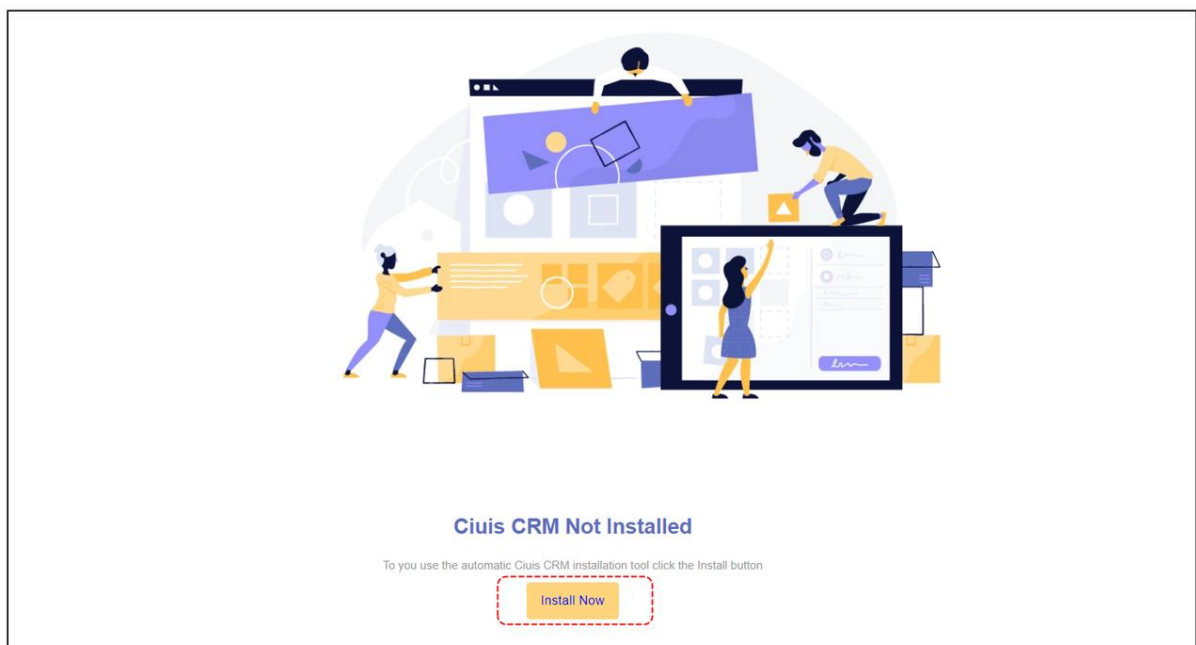

Create database 

Filters

Containing the word:

Database	Collation	Action
<input type="checkbox"/> ci4	latin1_swedish_ci	Check privileges

4. After creating the database open your default browser type in "**localhost/your folder name**"
5. Click on the "**Install Now**" button to begin the installation.

## Check for Requirements:

Make sure all the dependencies are installed. Click “Next” only if you see “Green Tick” beside all the dependencies.

Requirements	
Installation	
Complete	

Directory/File Permission	Writable
../application/config/database.php	✓
../application/config/config.php	✓
../app/templates/codeigniter_2x_&_3x.php	✓
/assets/files	✓
/uploads	✓
/uploads/files	✓
/tmp	✓

Required Extensions	Status
pdo	✓
mysqli	✓
openssl	✓
json	✓
session	✓
curl	✓
mbstring	✓
zip	✓
gd	✓
iconv	✓
allow_url_fopen	✓

Version	Status
PHP	You have <b>PHP 8.0.15</b> (Required 7.4.0 or greater)
PDO MySQL Client API	You have <b>PDO MySQL Client API 8.0.15</b> (Required 7.4.0 or greater)
safe_mode	<b>Disabled</b>

## Enter Credentials:

1. Type in your Hostname.
2. Type in your Username. Default Username is set to “root”
3. Type in your Password. Default Password is set to “root”, if not leave it blank
4. Select the Database you created earlier. “ciuis” in the case of our example.
5. Check the box next to Htaccess to give .htaccess.
6. Check the Dummy Databox to install the application with some example data. This may help you to understand the app better.
7. Click on “Install”.

Reset

Install

Wait for a moment for the installation to complete.

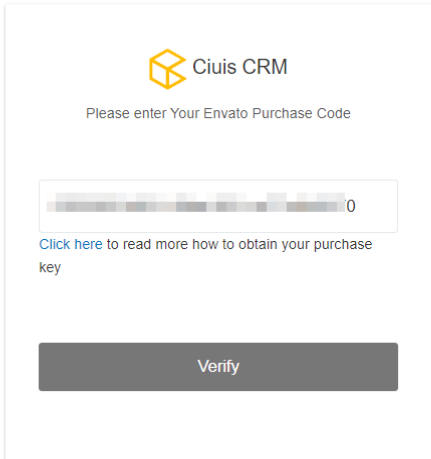

1. Verify your login credentials.
2. Click on **“Login”** to be taken to the main login page.

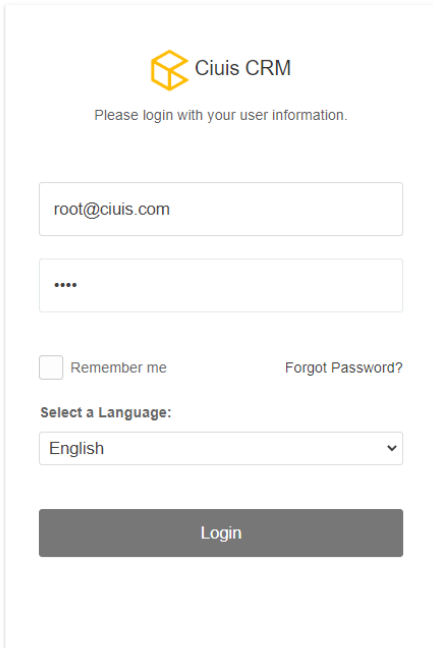

## License Key:

After installation Enter the license key of your products.

The screenshot shows a web interface for Ciuis CRM. At the top, there is a logo consisting of a yellow cube and the text "Ciuis CRM". Below the logo, the text "Please enter Your Envato Purchase Code" is displayed. A text input field contains a blurred license key ending in "0". Below the input field, there is a blue link that says "Click here to read more how to obtain your purchase key". At the bottom of the form is a dark gray button labeled "Verify".

1. Wait for it to verify your purchase. Once the license is verified, you will be re-directed to the **login page**.
2. Enter the login details and click on "**Login**" button.

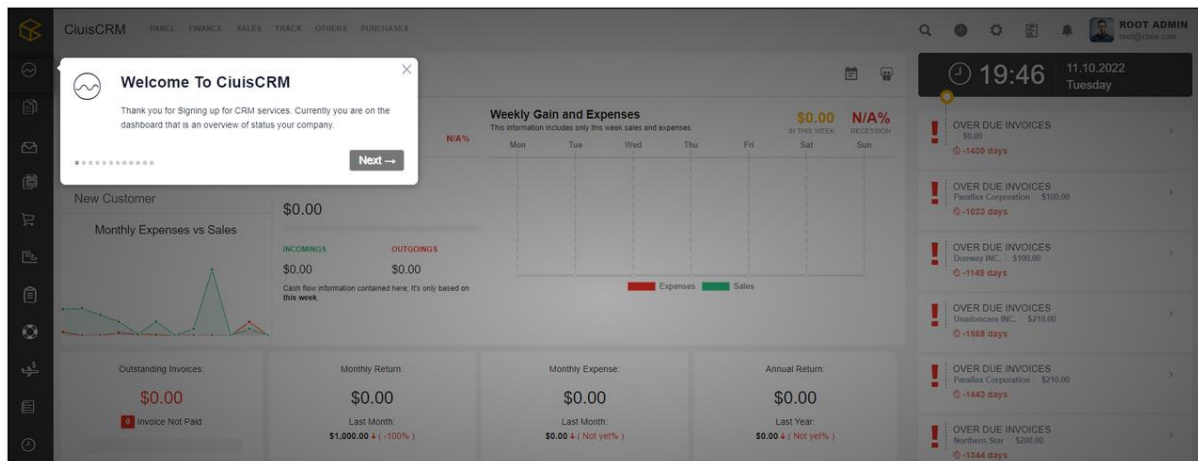

The screenshot shows a web interface for Ciuis CRM. At the top, there is a logo consisting of a yellow cube and the text "Ciuis CRM". Below the logo, the text "Please login with your user information." is displayed. There are two text input fields: the first contains the email "root@ciuis.com" and the second contains four dots representing a password. Below the password field, there is a checkbox labeled "Remember me" and a link labeled "Forgot Password?". Below these is a label "Select a Language:" followed by a dropdown menu showing "English". At the bottom of the form is a dark gray button labeled "Login".

---

***Congratulations! You have successfully logged into CiuisCRM.***

---

## Configure database connection:

You need to have a previously set up database from the cPanel.

Here is a good tutorial on [how to setup MySQL database in cPanel](#) if you are not familiar with this.

1. Login to cPanel by accessing [www.yourdomain.com/cpanel](http://www.yourdomain.com/cpanel) and navigate to MySQL Databases.
2. Create database.
3. Create a user and set up your password.
4. Add the user to the database by selecting the database and the username.

Make sure you have checked **All privileges** when adding the user to the database.

You can get access to our entire documentation here: <https://docs.cuiiscrm.com/hc/cuiiscrm>
